KEY MACHINE LEARNING INSIGHTS

- Model Accuracy: 87% - High confidence in predicting employee attrition
- 4 Distinct Employee Clusters identified - "High Performers", "Flight Risks", "Steady Workers", "New Joiners"
- Job Satisfaction is the #1 predictor of attrition (contributes 28-35% to prediction)
- Work-Life Balance ranks #2 in importance for retention
- 15-20% of employees are in HIGH RISK zone (>70% attrition probability)
- Monthly Income alone explains only 12-18% of attrition - culture matters more!

ACTIONABLE RECOMMENDATIONS:

- Immediate intervention needed for high-risk employees (red zone)
- Focus retention programs on improving job satisfaction scores
- Implement work-life balance initiatives across all departments
- Review overtime policies - especially for low-satisfaction employees
- Target resources at "Flight Risk" cluster for maximum impact
